**DETAILED ACTION*****Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 61-73 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 28-40 of U.S. Patent No. 6,719,778. Although the conflicting claims are not identical, they are not patentably distinct from each other because the new claims are merely broader in scope.

**Claim Rejections - 35 U.S.C. § 112**

Claims 51-73 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 51 recites the limitation "inducing fibrosis" in line 4.

Art Unit: 3739

The examiner respectfully suggests this is the result of applying an agent in combination with energy and not a separate step in the method for strengthening tissue. Therefore, the examiner has interpreted lines 3 and 4 of the claim to read as follows:

applying an agent in combination with energy to the target region to  
induce fibrosis in a target layer and, thereby strengthen the target tissue.

Likewise in claim 61 the examiner suggests that increasing an adventitial area in the area of the target tissue (line 5) is not a separate step in the method, but the result of administering an agent and applying energy to the target tissue. Therefore, the examiner has interpreted lines 4 and 5 of the claim to read as follows:

applying energy to the target tissue to react within the photoactivatable agent, to  
increase an adventitial area - - - tissue.

**Please acknowledge whether or not this interpretation is correct.**

### **Allowable Subject Matter**

Claims 51 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Claims 52-60 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

### **Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Vancaillie (5,095,917) disclose a method of female sterilization by applying a chemical scarring agent to tissue and applying an RF current to the tissue to occlude the fallopian tube, however, the electrical current destroys a superficial layer of the uterotubal junction rather than strengthening it; and Lessen (3,858,596) discloses a method of female sterilization by applying RF to the fallopian tube to form scar tissue but does not combine this with an agent.
